

PALLMANN

Knifering Cleaner

For complete cleaning of badly soiled knife rings from knife ring flaker, series PZKR 14-450 to PZKR 15-450

Application:

For the complete cleaning of slightly and badly soiled knife rings from „ORIGINAL PALLMANN“ knife ring flaker, type PZKR before changing of the knife packets or before the grinding process in the sharpening- and setting robot, type PZSE.

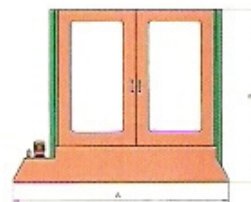

Functioning:

Nach After the knife rings have been changed in the knife ring flaker, the ring with the blunt and soiled knives is being placed upon the driven rollers of the knife ring rotating device by means of a lifting device.

After the doors are closed, the rotating knife rings is being cleaned by an oscillating cleaning lance from the outside. A high pressure cleaner with a working pressure of 230 bar is being used. Before the ring is taken out, the interior surface is additionally being cleaned by a separate nozzle.

Advantages:

Easier changing of the knife packets due to the fully cleaned ring. Easy and clean handling of the knife packets in the grinding room and as a result less time is required for the knife setting and knife sharpening. If the knife ring cleaner, type PZW is being used, the cleaning process in the sharpening- and setting robot becomes unnecessary.

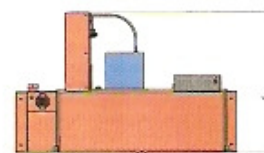

A = 2845 mm

B = 2270 mm

C = 1825 mm

Weight ca. 1500 kg
